

The bread on the table of shewbread

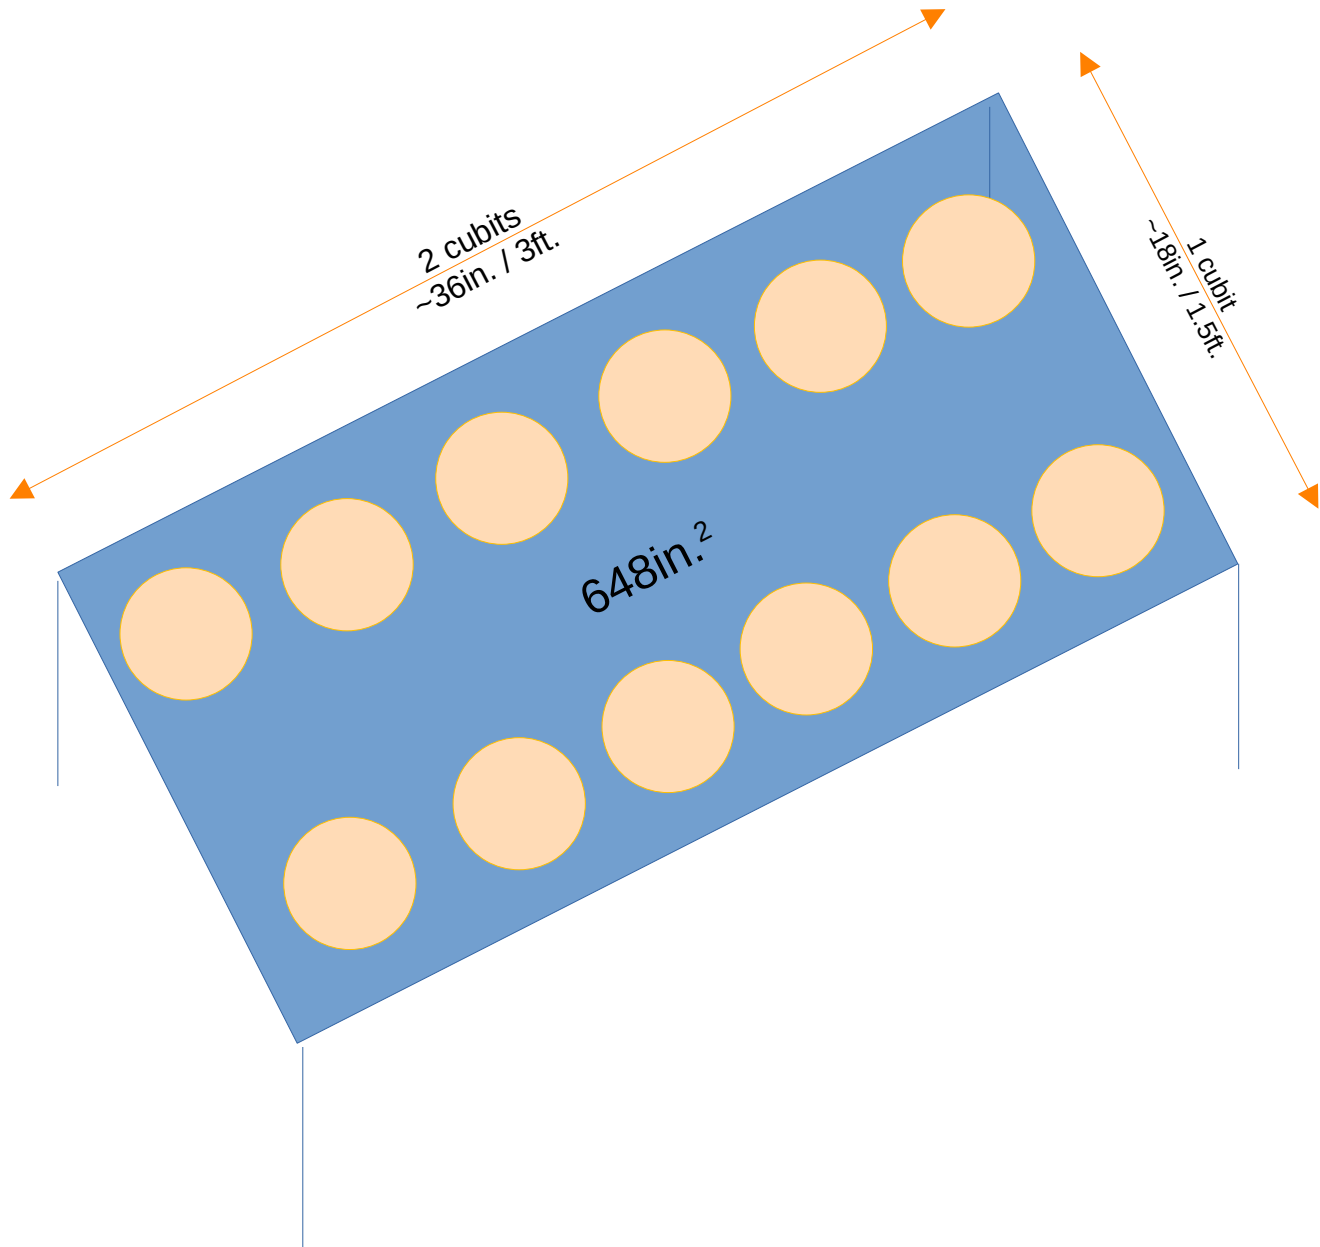

Exodus 25:23

Thou shalt also make a table of shittim wood: **two cubits** shall be the **length** thereof, and **a cubit** the **breadth** thereof, and a cubit and a half the height thereof.

Leviticus 24:5-6

⁵ And thou shalt take fine flour, and bake twelve cakes thereof: two tenth deals shall be in one cake.

⁶ And thou shalt set them in **two rows**, **six on a row**, upon the pure table before the LORD.

- If there was a $\frac{1}{2}$ inch gap between each piece of bread, and a $\frac{1}{2}$ inch gap on the outer edges, each piece of bread would have a 5 inch diameter.
- If there was a $\frac{1}{4}$ inch gap between each piece of bread, and $\frac{3}{8}$ inch gap on the outer edges, each piece of bread would have a 5.5 inch diameter.
- The maximum comfortable diameter for each piece that still fits on the table is ~5.92 inches.

If each piece of bread were instead a square, the maximum dimensions for each piece (allowing for a minimum of a $\frac{1}{4}$ inch gap on the outer edges) is 5.92 inches x 5.92 inches ($5 \frac{11}{12}$ x $5 \frac{11}{12}$).
